

AXIS Sustainability Readiness Review

How to use this template. This is a worked example for a fictional hotel, “Rumah Padi Resort, Ubud”. Replace every example entry with real findings, and delete this box and all *italic guidance notes* before sending. Keep the notice, rating definitions and evidence labels unchanged so every AXIS report reads the same way. Every section is framed around one question: what must this hotel address to achieve GSTC certification? The layout borrows from the two GreenSign audit reports (covering letter, people interviewed, areas inspected, changes to the review plan, evidence register), adapted for a readiness review rather than a certification.

Cover details

Hotel	Rumah Padi Resort (fictional example)
Location	Ubud, Gianyar, Bali
Hotel contact	[Name], General Manager
Purpose	Identify what the hotel must address to achieve GSTC certification
Standard used	GSTC Hotel Standard v4.01 (30 December 2025) and GSTC minimum performance requirements (April 2026)
Review date	[Date], one on-site day
Reviewer	[Name], AXIS
Report reference	AXIS-BALI-[year]-[number], version 1.0
Report date	[Date, within 2 weeks of the review]
Confidentiality	Confidential to the hotel. Anonymised data may be pooled for benchmarking under the signed agreement.

Covering letter

[Hotel contact name] Rumah Padi Resort [Address]

[Date]

Dear [Name],

Thank you for hosting the AXIS Sustainability Readiness Review at Rumah Padi Resort on [date], with [names and roles of hotel staff present].

You asked us to identify what Rumah Padi needs to address to achieve GSTC certification. This report compares what we saw on the day with all 40 criteria of the GSTC Hotel Standard v4.01, lists every gap a certification auditor would be likely to raise, and sets out what to fix, in what order. It is a readiness review, not a certification audit, and it does not award a score or a pass.

In summary, Rumah Padi has strong foundations in cultural heritage and local employment, and its community relationships are clearly genuine. The main gaps are in documentation and measurement: there is no written sustainability management system yet, energy and water use are not tracked per guest night, and Bali’s new waste separation and on-site organic processing expectations are only partly met. None of these gaps is unusual for an independent resort at this stage, and most can be closed within six months.

The certification action plan in section 7 lists what to fix first, and section 8 explains the route to certification. We recommend a follow-up review in about six months, before you book an audit with a GSTC-accredited certification body.

Thank you to your team for their time and openness.

Kind regards,

[Name] AXIS [Email] · [Phone]

1. Important notice

This is a limited, sample-based readiness assessment of the evidence made available on [date]. It is not certification, accreditation or a legal compliance determination, is not issued on behalf of any certification body, and does not guarantee the outcome of any certification audit.

In particular:

- **One day samples; it does not verify everything.** Findings reflect the areas visited, documents seen and people interviewed on the day. A criterion rated “Met” means the evidence seen supported it, not that it is met at all times.
- **The hotel remains responsible for its own legal compliance.** Where this report mentions laws or local rules, it flags them for the hotel to confirm with the relevant authority or its own advisers.
- **Standards change.** Findings are against the GSTC Hotel Standard v4.01 as published at the review date. Each certification scheme applies its own rules on top of it.
- **Independence.** AXIS does not certify hotels. AXIS is not affiliated with, or endorsed by, GSTC or any certification scheme.

Guidance: do not edit this wording without a reason. If AXIS joins GSTC, add “AXIS is a GSTC Organization Member; membership is not certification or endorsement.”

2. Summary of results

Rumah Padi Resort is **not yet ready for a GSTC certification audit**. Of the 40 criteria reviewed, 27 need work before an audit: 14 are partly met, 8 are not met and 5 have no evidence yet. Most gaps are about documentation and measurement rather than practice, so we estimate 4–6 months of focused work before booking an audit.

Pillar	Readiness	Met	Partly met	Not met	Not evidenced	Headline
A. Sustainable management	Early	3	5	4	2	No written sustainability management system or legal register yet
B. Socioeconomic impacts	Developing	4	3	1	1	Strong local hiring; no written anti-exploitation policy
C. Cultural impacts	Advanced	3	1	0	0	Good relationship with the banjar and respectful guest guidance
D. Environmental impacts	Developing	3	5	3	2	Waste sorted but not measured; energy and

Pillar	Readiness	Met	Partly met	Not met	Not evidenced	Headline
						water not tracked per guest night

Guidance: count each of the 40 criteria once (A 14, B 9, C 4, D 13), using Appendix C. The totals must match Appendix C. Never add the columns into an overall score or percentage.

Main strengths

- About 85% of staff live in surrounding villages, and three of the five department heads are local (staff-reported; payroll summary seen).
- The resort consults the local banjar before ceremonies and events and gives guests clear temple etiquette guidance (documented and observed).
- Solar hot water covers guest rooms, and all lighting seen was LED (observed).

Top five gaps to close before a certification audit (full list in section 7)

1. Write a short sustainability policy and management system, and name a coordinator (A1).
2. Build a register of the laws and permits that apply to the resort (A2).
3. Start recording monthly energy, water and waste figures, divided by occupied room nights.
4. Adopt a written policy against exploitation and harassment, covering children and vulnerable groups.
5. Start separating organic waste and processing it on site, in line with Bali's waste expectations (section 6).

What one day could not establish. We did not see a full year of operating records, visit staff housing, speak to community members or the banjar directly, or verify where waste goes after collection. The hotel should check these before booking an audit, as a certification auditor may.

3. Scope and method

How GSTC certification works

Hotels are **certified**; certification bodies are **accredited**. GSTC writes the standard but does not certify hotels itself. A hotel is certified by an independent certification body that GSTC has accredited, after an audit against the GSTC Hotel Standard. Hotels certified to the older v3.0 criteria keep their certificates until 30 December 2028; new audits use the Hotel Standard v4 (current edition v4.01). GSTC-certified hotels must also meet GSTC's minimum performance requirements (April 2026), including single-use plastic bans. This review checks against both.

Guidance: if the client says "accreditation", keep their word in conversation but use "certification" in the report, and explain the difference once, as above.

Scope of this review

Standard	GSTC Hotel Standard v4.01, all 40 criteria in four pillars (A–D), plus the April 2026 minimum performance requirements
Site	Rumah Padi Resort, 38 rooms, Ubud (fictional example)
Review type	One-day on-site readiness review, first visit
Duration	One reviewer-day on site, plus document review before and after
Method	Pre-visit questionnaire and document request; document review; site walk-through; staff interviews; closing debrief

People interviewed

Role	Name	Topics
General Manager	[Name]	Management system, legal compliance, community relations
Chief Engineer	[Name]	Energy, water, wastewater, chemicals
HR Manager	[Name]	Contracts, wages, training, policies
Executive Chef	[Name]	Purchasing, food waste
Housekeeping and garden staff (3)	Not recorded	Waste sorting, chemicals, training received

Guidance: name managers, but do not record names of junior staff interviewed. Tell interviewees their answers are confidential.

Areas inspected

- ☒ Sample guest rooms (2)
- ☒ Kitchen and food stores
- ☒ Laundry and housekeeping store
- ☒ Chemical store
- ☒ Waste area and compost bays
- ☒ Engineering plant: solar hot water, pumps, generator, wastewater treatment
- ☒ Gardens and grounds, including the river boundary
- ☒ Staff canteen and changing rooms
- ☐ Staff housing — not visited (off site)

How findings are rated

Status	Meaning
Met	The evidence seen supports every indicator reviewed
Partly met	Some indicators are met, or the practice exists but is not documented or consistent
Not met	The practice is absent, or evidence shows it is not in place
Not evidenced	The hotel says it happens, but no evidence was available on the day
Not sampled	Not reviewed on this visit; must be checked before an audit
Not applicable (provisional)	Appears not to apply; give the reason and confirm with the certification body

Priority	Meaning for certification
Critical	Likely to prevent certification. Close before booking an audit. Includes all GSTC minimum performance requirements.
Important	Likely to be raised by an auditor. Close before the audit if possible.
Improvement	Good practice beyond what an auditor is likely to require.

Each finding is also labelled by evidence type: **observed** (seen on site), **documented** (record or policy seen), **staff-reported** (said in interview, not verified) or **unverified** (claimed, no evidence). An auditor will expect documented or observed evidence for every criterion.

Every item of evidence has an ID so each finding can be traced: D01... documents, I01... interviews, O01... observations and M01... measurements (Appendix A). A verbal statement alone cannot show sustained practice, and an item not reviewed is not a failure.

Guidance: a guest stay can add useful observations, but it is no substitute for management records, staff interviews and access to back-of-house areas. Keep what you saw as a guest separate from verified practice, and agree full access before the visit.

Changes to the review plan

The wastewater treatment test results and the staff employment contract template were not available on the day. The hotel sent both on [date]; they were reviewed and are reflected in this report.

Guidance: always record late documents and anything not sampled, so the hotel knows exactly what was and wasn't checked.

4. Hotel profile and key figures

An auditor will expect the hotel to measure its energy, water and waste regularly and relate them to occupancy. Rumah Padi has the raw bills for energy and water but has never totalled or normalised them, and does not measure waste at all.

Type	Independent boutique resort, locally owned
Rooms	38 villas and rooms
Staff	64 (58 permanent, 6 casual)
Facilities	Restaurant, spa, pool, 2.1 ha gardens beside the river
Occupancy, last 12 months	72% (about 10,000 occupied room nights)
Water sources	Groundwater bore and mains supply
Wastewater	On-site treatment plant, discharge to garden irrigation
Existing certifications	SNI CHSE (national cleanliness, health, safety and environment standard)

Indicator (last 12 months)	Total	Per occupied room night	Data status	What certification needs
Electricity	420,000 kWh	42 kWh	Monthly bills held; totalled by AXIS on the day	Monthly tracking by the hotel, reduction targets
LPG and diesel	Not totalled	—	Delivery receipts held, not recorded	Record monthly by fuel type
Water	9,800 m ³ (mains only)	0.98 m ³ (mains only)	Bore water is not metered	Meter the bore; track all sources; assess water risk
Waste to landfill	Not measured	—	No records	Weigh or estimate by type monthly
Greenhouse gas emissions	Not calculated	—	No records	Calculate from energy and fuel data

Guidance: all figures in this example are fictional. Use occupied room nights (or guest nights, stated clearly) as the divisor and note occupancy. Do not compare a hotel's figures with other hotels until the AXIS benchmark has enough comparable hotels.

5. Gap analysis: what to address for certification

For each criterion, the “Gap to close” column says exactly what must exist on the day of a certification audit. Gaps marked Critical are the ones most likely to stop certification.

Guidance: this section shows the criteria with the most significant findings; Appendix C records a status for all 40. Write each gap as a concrete deliverable (“a written policy that...”), not advice (“consider improving...”). Describe gaps in operational terms and never call them “nonconformities”: only the certification body can make that call. Criterion names are shortened; check the official indicator text in the standard for each finding.

A. Sustainable management

In place: clear commitment from the owner and GM, honest marketing, and staff induction that covers waste sorting. Missing: almost everything an auditor checks first is undocumented.

Code	Criterion	Status	Evidence seen	Gap to close	Priority
A1	Sustainability Management System	Not met	I01: GM described goals verbally; nothing written	A written system: policy, named coordinator, objectives and targets, responsibilities, annual review, and records showing it is used	Critical
A2	Legal Compliance	Not met	D01, D02: business licence and CHSE certificate; no list of other obligations	A register of all laws and permits that apply (including groundwater, wastewater and waste rules; see section 6), each checked as current	Critical
A4	Reporting and Communication	Partly met	O06: sustainability page on the website	An annual sustainability summary with actual figures, shared with guests and staff	Important
A5	Accurate Promotion	Met	O06: website photos match the property; no certification claims	Keep claims to what can be proven; do not describe the resort as certified until it is	—

Code	Criterion	Status	Evidence seen	Gap to close	Priority
A7	Staff Engagement	Partly met	D03: induction slides; no attendance records	Training records with dates and attendance; materials in Bahasa Indonesia	Important
A13	Procurement	Not evidenced	I04: chef says about 60% of food is bought locally; no supplier list	A written procurement policy favouring local and environmentally preferable products, and a supplier list with a calculated local share (both linked to GSTC's minimum performance requirement on local purchasing)	Critical
A14	Food and Beverages	Not met	O07: individually plastic-wrapped portion items at breakfast; no sourcing guidance for the menu	Sourcing guidance for responsible, local and certified food; replace portion packs	Important

B. Socioeconomic impacts

In place: a strongly local workforce and contracts with national social security. Missing: written policies and a living-wage check.

Code	Criterion	Status	Evidence seen	Gap to close	Priority
B2	Local Employment	Met	D04: payroll summary shows about 85% of staff from nearby villages	Record the share of local staff and managers each year	—
B6	Code of Conduct	Not evidenced	I01: GM says suppliers are told the resort's expectations; nothing written	A written code of conduct for guests and suppliers, shared with both	Important
B7	Exploitation, Harassment	Not met	I03: no written policy	A written policy	Critical

Code	Criterion	Status	Evidence seen	Gap to close	Priority
	and Human Trafficking			protecting children, women and other vulnerable groups, covering trafficking, communicated to all staff, with records	
B9	Decent Work	Partly met	D05: contract template includes BPJS health and employment insurance; no wage review; no grievance procedure	A wage review against a local living-wage benchmark and a written staff grievance procedure (decent work is a minimum performance area)	Critical

C. Cultural impacts

In place: this is Rumah Padi's strongest pillar. Missing: records of what it already does.

Code	Criterion	Status	Evidence seen	Gap to close	Priority
C1	Cultural Interactions	Met	D10, O10: banjar consulted before events; temple etiquette card in every room	—	—
C2	Protecting Cultural Heritage	Partly met	I01: regular donations to village temple ceremonies; not recorded	A record of financial and in-kind support, with dates and amounts	Important
C3	Presenting Culture and Heritage	Met	O11: local artisans' work throughout; weekly dance by a village troupe	Keep written agreements and payment records with the troupe	Improvement

D. Environmental impacts

In place: solar hot water, LED lighting throughout, recyclables separated, no captive wildlife. Missing: measurement, targets, and several single-use plastic items that GSTC now bans for certified hotels.

Code	Criterion	Status	Evidence seen	Gap to close	Priority
D1	Energy Conservation	Partly met	D06, M01: 12 months of bills; O08: LED lighting, solar hot water	Monthly energy tracking by type, per occupied room night, with reduction targets (minimum performance requirement)	Critical
D2	Water Conservation	Partly met	D07, M02: mains bills; O03: bore unmetered; no water risk assessment	Meter the bore; track all sources; a written water risk assessment and targets	Critical
D3	Greenhouse Gas Emissions	Not met	No records	An emissions estimate from energy and fuel data, and a reduction plan (minimum performance requirement)	Critical
D5	Wastewater	Partly met	D08 (after visit): treatment plant test results within limits for most parameters	A regular testing schedule and records, with action taken on any failed parameter	Important
D6	Solid Waste	Partly met	O01, O02: recyclables separated; organic waste mixed with general waste; plastic water bottles in guest rooms	Monthly waste records by type; organic waste separated and processed; plastic bottles, straws and stirrers removed (minimum performance requirements)	Critical
D7	Harmful Substances	Partly met	O04, D09: locked chemical store; safety data sheets	A complete chemical inventory with safety data sheets	Important

Code	Criterion	Status	Evidence seen	Gap to close	Priority
			missing for 3 of 8 products	for every product	
D12	Animal Welfare	Met	O05: no captive wildlife and no animal activities offered	—	—
D13	Wildlife Harvesting and Trade	Not met	O09: spa boutique sells shell and coral jewellery with no record of origin	Stop selling items that cannot be shown to be legal; tell guests not to buy protected shell or coral souvenirs	Important

6. Local legal requirements an auditor will check

GSTC criterion A2 requires the hotel to know and comply with every law that applies to it, so a certification auditor will ask to see the hotel's own list of obligations and proof that each is current. The items below are the ones most relevant to a Bali resort. AXIS does not make legal compliance determinations: the hotel should confirm each item with the relevant authority or its own adviser.

Area	What to confirm	What we saw	Priority
Waste	In May 2026 Bali's governor directed tourism businesses to separate waste at source, process organic waste on site, reduce single-use plastic and run a verified waste system (Bali Provincial Government). Confirm which requirements apply in Gianyar regency and how compliance is verified	Recyclables separated; organic waste not separated or processed	Critical
Groundwater	Confirm the bore has a current groundwater extraction permit and any metering condition	Permit not seen; bore unmetered	Critical
Wastewater	Confirm discharge and testing requirements for the on-site treatment plant	Test results received after the visit; no permit seen	Important
Business licensing	Confirm business registration and tourism licences are current	Business licence seen	—

Area	What to confirm	What we saw	Priority
Employment	Confirm contracts, minimum wage and BPJS social security registration for all staff	BPJS in contract template; casual staff not checked	Important
Health, safety and hygiene	Keep the SNI CHSE certificate current	Certificate seen, current	—

Guidance: tailor this table to the regency the hotel is in (Badung, Gianyar, Denpasar and others may differ) and date every legal reference. If a rule has changed since the review, say so in the covering letter.

7. Certification action plan

Close all Critical gaps in the first three months, then use months 4–6 to build up the records an auditor will want to see. Start measurement early: an auditor will want to see records built up over time, not set up the week before the audit. Ask your chosen certification body how many months of records it expects.

Months 1–3: close the Critical gaps

#	Action	Criterion	Owner	Evidence the auditor will want
1	Appoint a sustainability coordinator and write the sustainability policy and management system	A1	GM	Signed policy; system document; coordinator named in the organisation chart
2	Build the legal register and check every permit, starting with groundwater and waste	A2	GM	Register with dates checked; copies of current permits
3	Write the procurement policy and start a supplier list with locations	A13, A14	Executive Chef	Policy; supplier list with calculated local share
4	Adopt a policy against exploitation, harassment and trafficking; brief all staff	B7	HR Manager	Policy; briefing attendance record
5	Review wages against a living-wage benchmark; write a grievance procedure	B9	HR Manager	Wage review note; procedure; notice in staff area
6	Install a meter on the bore; start a monthly energy, water and fuel log	D1, D2	Chief Engineer	Monthly log per occupied room night

#	Action	Criterion	Owner	Evidence the auditor will want
7	Separate organic waste and start on-site composting; start weighing waste by type	D6	Chief Engineer, Housekeeping	Waste log; compost area in use
8	Remove plastic water bottles, straws and stirrers; switch to refillable glass bottles	D6 (minimum performance)	Rooms Division	Observed on audit day; purchase records

Months 4–6: build the evidence

#	Action	Criterion	Owner	Evidence the auditor will want
9	Set reduction targets from the first three months of data	D1, D2, D6	Coordinator	Targets in the management system
10	Calculate greenhouse gas emissions and write a reduction plan	D3	Coordinator	Emissions estimate; plan
11	Complete a written water risk assessment	D2	Chief Engineer	Assessment document
12	Record training with attendance, in Bahasa Indonesia	A7	HR Manager	Training log
13	Record temple and community support with dates and amounts	C2	GM	Support log
14	Complete safety data sheets and a wastewater testing schedule	D7, D5	Chief Engineer	Complete file; test schedule and results
15	Publish a short sustainability summary with real figures	A4	Coordinator	Summary on website and in rooms
16	Write a guest and supplier code of conduct; stop selling shell and coral items of unknown origin	B6, D13	GM, Spa Manager	Code of conduct; boutique stock list
17	Write a health, safety and emergency risk	A3	Chief Engineer	Risk assessment; drill and first-aid training records

#	Action	Criterion	Owner	Evidence the auditor will want
	assessment for guests and staff			
18	Gather land title and water rights documents, records of the 2019 extension, and a log of stakeholder meetings	A9–A12	GM	Title documents; permits and impact records; meeting log
19	Publish accurate accessibility information for guests	B5	Rooms Division	Website and booking information
20	Check whether the bore affects neighbours' water, and set up a community feedback channel	B4	GM	Assessment note; feedback log
21	Survey the grounds and river boundary for invasive plants, wildlife, noise and light spill	D8–D10	Garden Supervisor	Survey record; control and planting plan

An action counts as closed only when operating records show it is working, not when a document has been written. A policy on its own is a start; the auditor will also look for the practice it describes.

Month 6: check readiness, then book

- ☐ AXIS follow-up review against the same criteria
- ☐ Choose a GSTC-accredited certification body and request a quote (section 8)
- ☐ Book the certification audit once no Critical gaps remain

Guidance: every action names one owner and the evidence an auditor will ask for. Keep actions the hotel can do itself; if it needs outside help, say what kind, not who.

8. Route to GSTC certification

Once the Critical gaps are closed, the hotel chooses a GSTC-accredited certification body, which audits it and issues the certificate. AXIS cannot certify the hotel and has no commercial link with any certification body.

Steps

1. **Close the gaps** in section 7 and keep records running.
2. **Shortlist certification bodies.** GSTC publishes the list of accredited certification bodies on its website. Check which ones audit in Indonesia.
3. **Request quotes.** Compare total cost over the certificate's life, including annual surveillance and auditor travel.
4. **Complete the certification body's application and self-assessment,** and send the documents it asks for.
5. **Certification audit.** An on-site audit, usually followed by a period to correct any nonconformities before a decision.
6. **Keep it up.** Maintain records and targets; expect surveillance or renewal audits.

Questions to ask each certification body

- ☐ Are you accredited by GSTC for hotels, and will you audit us against the Hotel Standard v4.01?
- ☐ How do you apply GSTC's April 2026 minimum performance requirements, and what thresholds and evidence periods do you expect?
- ☐ How many months of monitoring records do you expect at the first audit?
- ☐ What does certification cost over its full term, including surveillance audits and travel?
- ☐ Can the audit be run in Bahasa Indonesia as well as English?
- ☐ How long do we have to correct findings raised at the audit?
- ☐ Do your rules restrict who may advise us before the audit?
- ☐ Which logos and claims may we use once certified?

GSTC-recognised schemes. Some schemes, such as Green Globe and Travelife, use their own standards that GSTC recognises as equivalent to its criteria. If the hotel's goal is to be described as GSTC-certified, ask each scheme whether its certificate is issued by a GSTC-accredited certification body, and what claim it allows.

Guidance: keep this section neutral. Do not recommend a specific certification body or scheme by name unless the client asks, and never receive referral fees from one.

Appendix A: Evidence register

Every document reviewed, so the hotel knows what an auditor will also want to see.

ID	Evidence	Criterion	How received	Date or period
D01	Business licence	A2	Seen on site	[Date]
D02	SNI CHSE certificate	A2	Seen on site	[Date]
D03	Staff induction slides	A7	Sent before visit	[Date]
D04	Payroll summary by village of residence	B2	Seen on site	[Month]
D05	Employment contract template	B9	Sent after visit	[Date]
D06	Electricity bills	D1	Sent before visit	Last 12 months
D07	Mains water bills	D2	Sent before visit	Last 12 months
D08	Wastewater test results	D5	Sent after visit	[Date of test]
D09	Safety data sheets (5 of 8 products)	D7	Seen on site	[Date]
D10	Banjar event consultation letters	C1	Seen on site	Last 12 months
I01	General Manager	A1, A2, B6, C2	Interview	[Date]
I02	Chief Engineer	A3, D1–D7	Interview	[Date]
I03	HR Manager	B7, B9	Interview	[Date]
I04	Executive Chef	A13, A14	Interview	[Date]
M01	Electricity per occupied room night, calculated by AXIS from D06 and occupancy	D1	Calculation	Last 12 months

ID	Evidence	Criterion	How received	Date or period
M02	Mains water per occupied room night, calculated from D07	D2	Calculation	Last 12 months

Guidance: record interviews by role, not name, if the person prefers. Never include unnecessary personal information.

Appendix B: Observation and photo log

ID	Area	What was observed	Photo	Criterion
O01	Guest rooms 12 and 20	Plastic water bottles on minibar	P01	D6
O02	Waste area	Recyclables separated; organic waste mixed with general waste	P02	D6
O03	Engineering	Unmetered bore pump	P03	D2
O04	Chemical store	Locked store, labelled shelves	P04	D7
O05	Grounds	No captive wildlife or animal activities	—	D11, D12
O06	Website	Photos match facilities; sustainability page, no figures	—	A4, A5
O07	Breakfast buffet	Plastic-wrapped portion items	P05	A14
O08	Plant room and rooms	Solar hot water; LED lighting throughout	P06	D1
O09	Spa boutique	Shell and coral jewellery for sale	P07	D13
O10	Guest rooms	Temple etiquette card	—	C1
O11	Public areas	Local artisans' work; village dance performance	—	C3

Guidance: take photos only with the GM's permission, never of guests or identifiable staff, and keep them confidential to the hotel.

Appendix C: Criterion coverage register

A status for every criterion of the GSTC Hotel Standard v4.01. The counts in section 2 come from this table.

Code	Criterion	Status	Action (section 7)
A1	Sustainability Management System	Not met	1
A2	Legal Compliance	Not met	2

Code	Criterion	Status	Action (section 7)
A3	Guest and Staff Welfare	Partly met	17
A4	Reporting and Communication	Partly met	15
A5	Accurate Promotion	Met	—
A6	Information Sharing and Guidance	Met	—
A7	Staff Engagement	Partly met	12
A8	Guest Experience	Met	—
A9	Collaboration with Stakeholders	Partly met	18
A10	Land, Water and Property Rights	Not evidenced	18
A11	Site Selection, Planning and Development	Not met	18
A12	Buildings, Construction and Infrastructure	Partly met	18
A13	Procurement	Not evidenced	3
A14	Food and Beverages	Not met	3
B1	Community Support	Met	—
B2	Local Employment	Met	—
B3	Local Entrepreneur Support	Met	—
B4	Community Services and Livelihoods	Partly met	20
B5	Access for All	Partly met	19
B6	Code of Conduct	Not evidenced	16
B7	Exploitation, Harassment and Human Trafficking	Not met	4
B8	Employment Inclusion and Equality	Met	—
B9	Decent Work	Partly met	5
C1	Cultural Interactions	Met	—
C2	Protecting Cultural Heritage	Partly met	13
C3	Presenting Culture and Heritage	Met	—
C4	Artifacts	Met	—
D1	Energy Conservation	Partly met	6, 9
D2	Water Conservation	Partly met	6, 9, 11
D3	Greenhouse Gas Emissions	Not met	10
D4	Transportation	Met	—
D5	Wastewater	Partly met	14
D6	Solid Waste	Partly met	7, 8, 9
D7	Harmful Substances	Partly met	14

Code	Criterion	Status	Action (section 7)
D8	Minimize Pollution	Not evidenced	21
D9	Biodiversity Conservation	Not evidenced	21
D10	Invasive Species	Not met	21
D11	Interactions with Animals	Met	—
D12	Animal Welfare	Met	—
D13	Wildlife Harvesting and Trade	Not met	16

Guidance: criterion names are shortened from the GSTC Hotel Standard v4.01; check them against the official text before first use, and assess each against its official indicators.
